

TEMPORARY STABLES - LH WOODHOUSE

L.H Woodhouse, show and event specialists, constructed temporary stables at Hickstead, this system was deployed for the 2012 London Olympic Games, and 2014 World Equestrian Games.

J & J Carter completed the design and manufacture of a modular curved roof structure, including the textile membrane, for the temporary stables.

The system is a combination of using existing frame structure stock with an existing modular stable block. The end result is a sustainable system which goes on to replace older timber systems used at Agricultural show and various Sporting Events.

KEY FACTS

LOCATION: United Kingdom

STRUCTURES: Frame Supported

INDUSTRY: Sport

ROOF FORMS: Barrel Vault
