ARRK EUROPE

Due to a new contract, ARRK Europe needed a warehouse structure to serve as an additional storage facility. As such, J & J Carter installed a Series 170 10m x 12.5m with a side height of 4.4m. The structure was erected in just two and a half days.

The structure is modular, making it easy to repair and relocate. The client also wanted a good degree of light inside so window panels were included meaning 26% of the roof provided natural light. A large sliding curtain door was also installed.

The client was "very, very happy" with the warehouse structure J & J Carter provided.

KEY FACTS

LOCATION: United Kingdom

STRUCTURES: Frame Supported

INDUSTRY: Industrial

ROOF FORMS: Planar
