

NEWBURY COLLEGE

The existing shade sails at Newbury College were tired and in need of replacing, however there were no existing drawings for our design team to work from.

As a result, we sent in a surveyor who created a 3D survey of the structures. This enabled us to recreate a pattern model to fit the existing site.

The result was two brand new custom made canopies. From start to finish the project took three days with minimal disruption to both the staff and students.

KEY FACTS

LOCATION: United Kingdom

INDUSTRY: Education

MATERIALS: PVC/PES

STRUCTURES: Tension Structure

ROOF FORMS: Hypar
