

TONE SCAFFOLDING | GAS DRILLING RIG COVERING

[Tone Scaffolding](#) has recently been challenged by one of their oil and gas clients to make this impressive structure, free-standing due to site constraints, which they performed using innovative techniques to create a bespoke design.

Tone Scaffolding required a PVC cover for noise containment for the gas drilling facility owned by Star Energy. J & J Carter created a PVC keder roofing system to cover the roof of the 37m high Layher scaffolding structure.

KEY FACTS

LOCATION: United Kingdom

STRUCTURES: Frame Supported

INDUSTRY: Industrial

ROOF FORMS: Planar

MATERIALS: PVC/PES
