

Press Release

J&J Carter are announced as a finalist for the 2014 Test Valley Business Awards

April 2014

The Test Valley Business Awards provide an opportunity for local businesses to receive recognition for their outstanding achievements. During the Gala Dinner, to be held at The Lights in Andover, six awards will be presented. J&J Carter are finalists for the Innovation and Technology Award.

J & J Carter Ltd, founded in 1988, are specialists in the design and building of tensile structures. These include rental structures for events, architectural features, canopies and sports halls. Drawing on this extensive experience they have developed ecological solutions to environmental problems. As such, they now manufacture products such as Bio Gas Covers and Oil Booms.

The Test Valley Business Awards have recognised J&J Carter for their Eco Dam; a temporary, removable, re-usable and recyclable flood defence barrier. The Eco Dam is an effective and efficient alternative to more traditional methods of flood defense such as sand bags. It can be used to protect homes, as a temporary cofferdam on construction sites or during the re-construction of Water Ways and Rivers.

The Eco Dam is manufactured from high tensile PVC coated polyester. When it is filled with water the Eco Dam's specially patented design prevents rolling. The overlapping modular design also enables extended protection and can be arranged to form various shapes, thus affording protection to large areas.

The benefits of the Eco-Dam are many, including:

- Easy usage
- Fast deployment
- Minimal storage facilities required
- Does not require specialists nor mechanical knowledge to install
- Sustainable
- Leaves your land intact after use even if deployed on tarmac or concrete
- Cost effective to purchase and use

For more information on how an Eco-Dam could benefit you, please contact J&J Carter:
